Achiridge®

PRODUCT FEATURES

The Achiridge System is an elegant method to treat acute Achilles tendon ruptures. It is a minimally invasive procedure that allows direct visual control of the repair, as well as percutaneous introduction of the sutures. The surrounding soft tissues and tendon itself are treated with the care to avoid any local trauma.

- Indications
- Acute rupture (< 10 days)
 - Rupture located between 2 and 8 cm above calcaneus
 - Open or closed rupture

- Contraindications
- Previous local surgery
 - Chronic or neglected rupture
